## 8.2.03 - How change font in message area

Author: rmeaille@medinfo.fr (foster06)

Hello,

For a customer I have to display several information in arabic font.

This is done in an editbox by changing the font, but, I have to display help information in arabic in message area using command message/hint.

But the help information is not correctly display because it is not arabic font.

Is anybody knows if it's possible to change the font of the message area, and how ?

Thank a lot.

Robert
