

Uniface 9: Drag and Drop on Tree widgets

Drag and Drop on Tree widgets

Author: mjmchatsworth@hotmail.co.uk (mjmchatsworth)

I have been trying to get drag and drop between 2 tree widgets working without success, these widgets simply use the tree view and our built via parent - child valreps definitions. I have setup formats and attached to the types via Drag and Drop screen, have rebuilt the DOL fiel many times for UOBJ. Whenever I select an entry in the displayed tree I get the black outlined little circle with a diagonal line through it, whenever I am on the same widget or copying across to the other tree. Any help would be appreciated.
