

# Uniface 9: Time to delete instance WINWORD too long

## Time to delete instance WINWORD too long

Author: rmeaille@medinfo.fr (foster06)

Hi,

We are changing our software by changing the call to Winword from OLE to Signature.

Now after the quit Winword command, we do a deleteinstance of the Winword handle, and this Uniface command takes more than 2 seconds.

Example of our code :

```
NewInstance "WORD", $H_WORDS$  
$H_WORDS$->VISIBLE( 1 )
```

```
$H_WORDS$->DOCUMENTS( $DOCUMENTS$ )  
$DOCUMENTS$->OPEN( $DOCUMENT$, filename )  
$DOCUMENTS$->NAME( ref_new )
```

```
$H_WORDS$->WQUIT( 0 )  
deleteinstance $H_WORDS$
```

The deleteinstance take more than 2 seconds.

Anybody knows why it is so long ?

Thanks for your help.

Robert
