

Uniface 9: Alternate ribbon bar

Alternate ribbon bar

Author: palgam0@hotmail.com (George Mockford)

I've been working on a small project to introduce a simple ribbon bar into the Uniface GUI and I thought I'd share.

It uses the ocx control to render a web page using jquery.

True it's not as complete as some of the embedded activex versions I've seen but the technique used to interface to the ocx container might prove useful. Plus for good measure I added an alternate view showing a jquery accordion.
