

Bugs, Issues and Errors: HTMLwidget 9.6.07 can not render on loadHTML if a string contains uniface list, but can on loadURL

HTMLwidget 9.6.07 can not render on loadHTML if a string contains uniface list, but can on loadURL

Author: ulrichmerkel@web.de (ulrich-merkel)

see my example on <http://unifaceinfo.com/forum/bugsnerrors/good-to-hear-htmlwidget-9-6-07-works-as-well-as-in-9-6-04/#p6049621> I used loadhtml to bring the HTML code to the widget and it works quite well. Now i enhanced the HTML onclick="a_test('button-activated', 'ab=12)" to return a uniface list. In 9.6.07 this will cause a parsing problem because the button is not rendered at all (and it's not in the DOM). But dumping the HTMLcode to a local file and read it via loadURL works without problems: `lfiledump X_HTMLCODE.DUMMY, "C:\BUG_LOADHTML.html" $fieldhandle(X_HTMLWIDGET.DUMMY)->$widgetoperation("loadURL", "file:///C:/BUG_LOADHTML.html")`
