

Uniface 9: Urouter/Userver

Urouter/Userver

Author: sbpatel48@gmail.com (Sandip)

Hi, Can someone pls help me out with Urouter/Userver.

I want to register an application on the Urouter. Then from my client I'll activate a Service, which will send a Postmessage to a component (form) in the application that i have registered.

Can anyone pls tell me how i can send a Postmessage to a form that i have registered on Urouter.

I know i give the \$instancepath as part of the Postmessage ' ie Postmessage "\$BCOM:form.....

What i'm unsure abt is setting the \$BCOM path, to point to the Registered application

Thanks for any help
