

# Uniface 9: want to run solid database on AIX platform

want to run solid database on AIX platform

Author: lalitpct@gmail.com (lalitpct)

At present we use separate repository (windows server) to store the uniface code and solid database, I want to eliminate the need of the windows server by running Solid on the development AIX machine. I didn't get document for installing and starting solid on AIX server, So I have below query 1) Is it possible to execute SOLID on AIX server. 2) Is there any other way I can eliminate the need of other repository server.
