

Uniface 9: \$windowproperties Backcolor

\$windowproperties Backcolor

Author: lammersma@hotmail.com (lammersma)

Hi,

I have a couple of questions about the backcolor property of \$windowproperties.

1. When I try the example from the documentation: `$windowproperties ("MYFORM", "BACKCOLOR=lightblue")`, I get a syntax error. When I try `$windowproperties ("MYFORM") = ("BACKCOLOR=lightblue")` I get no error.
2. In a test component in IDF `$windowproperties ("MYFORM") = ("BACKCOLOR=lightblue")` works fine. When I try the same code in a form in my application I get an `procerror -1132`. What can be the problem here? IDF and Uniface use different ini's.

kind regards,

Peter
