

Uniface 10 Enterprise Edition: Export Form: Browsing with focus in Model Name should not replace Entities entry

Export Form: Browsing with focus in Model Name should not replace Entities entry

Author: ulrichmerkel@web.de (ulrich-merkel)

Assume we want to export all entities for a datamodel. We enter the All-Wildcard in the entities field and TAB to the Model Name field. There we use the browse feature to determine which Model we want to download. Leaving the selection will set the selected Model Name, but unfortunately the Entities field as well. Think this is a bit counterintuitive.
