Good to hear: HTMLwidget 9.6.07 works as well as in 9.6.04

Author: ulrichmerkel@web.de (ulrich-merkel)

It's good to hear that in 9.6.07 the HTMLwidget works as well as in 9.6.04. The test is based on a simple button with some onclick="a_test('button-activated', 'ab=12')". When clicked, it raises an alert, called a uniface extended trigger which in turn raised a message/info. function a_test(a_from, a_text) {alert(a_from + ' ' + a_text);window.unifaceTriggers('a_test_callback', a_from + ' ' + a_text);}. Between the versions mentioned above, it took an additional click in the application window after quitting the alert to get the message/info.
