

Uniface 10 Enterprise Edition: preparing for Webex details and instructions What's New in Uniface 10

preparing for Webex details and instructions What's New in Uniface 10

Author: ulrichmerkel@web.de (ulrich-merkel)

After I have attended the "First Class Training" on 97, I registered for the U10 counterpart Webex event today (from 10:30 - 4:00 pm EST). As in U97 the workbook included very detailed illustrated step-by-step instructions I assume the U10 could be seen as an "operating guide by example" for the U10 IDE. In preparation for this event I followed the instructions, but found a little stumblestone I want to share with you:

I had already installed U10.3 on another drive, so I had to make some adjustments: Obvious was the change in file ide.cmd and both imports worked without problems. But when I tried to open the IDE in dialog mode, I got an exceptions as some HTML could not be found. Reason was a hardcoded path in the delivered ide.asn which needs to be set to the installation directory.

As it runs 16:30 - 22:00 for german attendants, it seems to become a promising long evening. See you there, Uli
