9.7.01: the output format for \$PROC_TRACING has (dramatically) changed (currently not documented)

Author: ulrichmerkel@web.de (ulrich-merkel)

according to <http://unifaceinfo.com/fixes/issuelist/31092.php> the output format for \$PROC_TRACING has (dramatically) changed (currently not documented) For the group of us who, for productivity reasons, apply some post processing to proc tracing this means some major change in "parsing" the (data-)line to reconstruct the current output format. AFAIK, if one needs to have the procerror in the tracing, it is even in 9.6 possible to have a customized \$PROC_TRACING_ADDITION.
