

Bugs, Issues and Errors: Menu compiler messages give a 1126 error

Menu compiler messages give a 1126 error

Author: knut.ivar.alvestad@logica.com (knutia)

Hi

I am fairly new to Uniface and need help to figure out why I'm getting an error when compiling. Getting the same error when using /all as when I use /men. The error is as follows:

error: 1126 - Cannot compile; specified information not found.

Menu compiler messages: [info 0, warnings 0, errors 1] in 0 menu(s)

This program shod not has any menus so why do I get this error? When looking for menus in idf there is none I can find. How can I figure out this so it does not fail? Anyone having the same problem or have a solution?

The program does not have glyphs and when compiling it displays "Can't find Glyph(s)" so I expected menu to do the same.
