

Uniface 9: Permission Control in IDF

Permission Control in IDF

Author: knut.dybendahl@gmail.com (Knut)

So, I decided to turn on the Permission Control under System Preferences. I had a look at the various options that opened up - then I went back and turned it off again - all within the same session in IDF. I repeat, I did not leave IDF whilst turning on / turning off. Now, when I attempt to get into the local development env on my laptop at home - I get the username / password box... Where in the repository is this stored? I've cleaned out UOBJ - there's nothing in UMEMBER - all tables in SYSENV are empty - so what's missing? Any ideas anyone apart from restore backup / create a new repository? Knut
