

# Uniface Anywhere: Different application sets for different users

## Different application sets for different users

Author: tomas.hogvag@abilita.fi (thogvag)

Hi, We have an Anywhere server where we need to deploy applications for two different organizations. In this case each organization will have its own username ie. *org1*, *org2*. We want to publish the applications so that when *org1* logs in to Anywhere he does not see the applications that belong to *org2* and vice versa. What would be the best way to accomplish this? best regards, Tomas
