

Uniface Integration: Basic authentication in header soap message

Basic authentication in header soap message

Author: afz_guc@rdv25772.dds.nl (rdv25772)

Hello everyone, For a customer I need to add basic authentication in the header of a soap message, not in the message self. I have been searching in the help of Uniface and on the web. Neither sources states information on how to solve it. What I can find is about SMTP handling. I want to do the handling with Uniface and not with other programmes. At the moment Uniface 9.6 is used. In the near future a migration to Uniface 9.7(.04) will take place. At this moment it is expected that the required change will be done in 9.7, but this is a decision to be made. Can anyone set me to the right direction?
Regards, Richard
