

# Uniface 9: big problem with date fields[U9.4]

## big problem with date fields[U9.4]

Author: spanish\_uniface@hotmail.es (uniface8)

Hi all, i have a big problem with datefields; we have stored in our database fielddates with format '0001-01-01 00:00:00.000000' but U9.4 not recognize that as a date format, so when i retrieve that fields, uniface returns only zeros '00000000'.

Is there any parameter to modificate that?

I mean, i know that i can control that with a few lines of code, but we have thousands of forms, any other solution will be great.

Regards,Rafa.
