

Uniface Technical Support: IDF on Linux

IDF on Linux

Author: knut.ivar.alvestad@logica.com (knutia)

Hi

I want to change my OS from Windows to Linux.

Is it possible to use Uniface development on a Linux OS, for instants on Ubuntu ?

If it is possible on Linux, which distors or cores are supported?

If it is possible, how or where can I download it?

I do have license to windows, is it a different one for Linux or can I use the same one?
