

Uniface 9: **[SOLVED]** Uniface Profiling log

[SOLVED] Uniface Profiling log

Author: gianni.sandigliano@unifacesolutions.com (gianni)

Hi Unifacers, saving a profiling log from a running uniface application is logging many attributes on each line. Three couples of values are saved without and with a _X into their names: - ELAPSED / ELAPSED_X - IDLETIME / IDLETIME_X - DBMSTIME / DBMSTIME_X Meaning for each couple of values is clear but what really differentiate the column without _X from the one including _X ? I've looked into documentation but without success... Sometimes values into _X column have a value lesser, sometimes greater sometimes equal to than the one into corrispondent column without _X into its name... Thanks in advance for any contribute. Gianni
